related equipment. It's available only through 2005, so businesses should decide quickly whether or not to spend while the spending's good.

IBM plans Web-based desktop software. Lotus Workplace strategy, is a bundle that includes e-mail, word-processing, spreadsheet and database applications aimed at business users. The new software is designed to be distributed and accessed through a Web server, and accessible from systems running Windows, MAC, Linux, Unix and handheld devices. IBM hopes to sway customers to Lotus Workplace with ease of management, mobility and price. The new software is designed to be used offline, so mobile users on laptops or handheld devices can connect, quickly access applications and disconnect to work offline. IBM

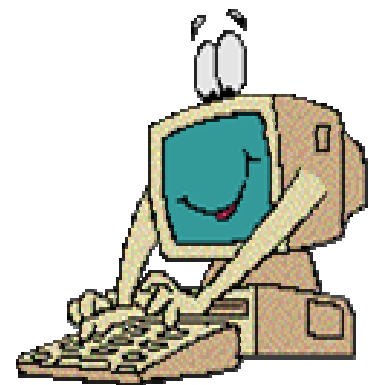

plans to charge \$2 per user per month for access to the software, plus the cost of server software to make the system work.

The History Channel's 13-episode series on "Decisive Battles" that debuts July 17 makes use of a not-yet-released PC game to re-create the epic battles that mark ancient Rome's colorful history. "Rome: Total War" will be published by Activision this fall.

Sue Crane is the Editor of *Bearly Bytes*, Newsletter of the Big Bear Computer Club, California. ♥

"SNAPSHOT"

Snapshot was an old hunting term for a shot taken suddenly and without careful aim. It was first applied to Photography around the time of the American Civil War. But it wasn't until the advent of the Kodak Brownie and its many imitators that the term became a household word. ♥
